Solution is here

<http://drupal.org/node/235972> [2]

#21 has a patch that I confirm is working for all versions. Apply it to the tinymce.module file.

It's only one line so you can do it manually too.
replace on 187:

```
document.write("
  <div>
    <a href=\"
javascript:mceT
oggle('edit-$textarea_name', '
wysiwyg4$textarea_name');\" id=\"wysiwyg4$textarea_name\">
  $link_text
    </a>
  </div>"
);
```

with:

```
$('#edit-$textarea_name').after("
  <div>
    <a href=\"
javascript:mceT
oggle('edit-$textarea_name', '
wysiwyg4$textarea_name');\" id=\"wysiwyg4$textarea_name\">
  $link_text
    </a>
  </div>"
);
```
